1. Introduction

This guide explains how to install and set up Nexora products, including Nexora CloudDesk, Nexora SecureVault, Nexora InsightPro, and Nexora Connect, across web, desktop, and mobile platforms. It also covers first-time workspace configuration and common installation problems.

2. Before Installation

Before installing a Nexora application, confirm that your device meets the supported requirements for the relevant platform, and that you have a stable internet connection for account creation and initial synchronization.

3. Account Creation

- 1 Visit the Nexora account sign-up page.
- 2 Enter the required registration details.
- 3 Create a password that meets the password requirements described in Section 12 of the User Manual.
- 4 Submit the registration form to create your account.

4. Account Verification

Where account verification is required, follow the verification instructions sent to your registered email address before continuing with product installation.

5. Product Selection

After your account is created, select the Nexora product you want to install: Nexora CloudDesk, Nexora SecureVault, Nexora InsightPro, or Nexora Connect. You can install additional products at any time.

6. Web Access

6.1 Supported Browsers

Nexora products are supported on the latest two stable versions of the following browsers:

- Google Chrome
- Microsoft Edge
- Mozilla Firefox
- Safari

6.2 Browser Requirements

- A stable internet connection.
- JavaScript enabled.
- Cookies enabled for authentication.
- A recommended minimum screen resolution of 1280 x 720.

No installation is required for web access. Simply sign in to your Nexora account through a supported browser to begin using your selected product.

7. Windows Installation

7.1 Windows Requirements

- Windows 10 or later
- Recommended 8 GB RAM
- Recommended 1 GB available storage
- Stable broadband connection

7.2 Windows Installation Steps

- 1 Download the Windows installer for your selected Nexora product through an official Nexora channel.
- 2 Run the downloaded installer file.
- 3 Follow the on-screen setup steps to complete installation.
- 4 Launch the application and sign in with your Nexora account.

8. macOS Installation

8.1 macOS Requirements

- macOS 12 or later
- Recommended 8 GB RAM
- Recommended 1 GB available storage
- Stable broadband connection

8.2 macOS Installation Steps

- 1 Download the macOS installer for your selected Nexora product through an official Nexora channel.
- 2 Open the downloaded installer package.
- 3 Follow the on-screen setup steps to complete installation.
- 4 Launch the application and sign in with your Nexora account.

9. Android Installation

9.1 Android Requirements

Android 10 or later is required.

9.2 Android Installation Steps

- 1 Open an approved application store on your Android device.
- 2 Search for the relevant Nexora product application.
- 3 Install the application.
- 4 Open the application and sign in with your Nexora account.

10. iOS Installation

10.1 iOS Requirements

iOS 16 or later is required.

10.2 iOS Installation Steps

- 1 Open an approved application store on your iOS device.
- 2 Search for the relevant Nexora product application.
- 3 Install the application.
- 4 Open the application and sign in with your Nexora account.

11. First Login and Workspace Configuration

After installing a Nexora application, sign in using your registered email address and password. On first login, you may be guided through initial workspace configuration, including naming your workspace and setting basic preferences.

12. Team Invitations and Permissions

Where applicable, you can invite team members to your workspace after initial setup. Invited members receive an email invitation to join, and can be assigned role-based permissions appropriate to their responsibilities within the workspace.

13. Desktop Synchronization

Desktop applications synchronize workspace data with your Nexora account over your internet connection. Synchronization typically happens automatically; if data appears out of date, confirm your internet connection is stable and that the application has been able to communicate with your Nexora account.

14. Nexora CloudDesk Initial Setup

- 1 Create or join a team workspace.
- 2 Set up an initial project board.
- 3 Invite team members where applicable.
- 4 Configure notification preferences.

15. Nexora SecureVault Initial Setup

- 1 Create your initial folder structure.
- 2 Configure role-based access for your team.
- 3 Enable multi-factor authentication where available.
- 4 Review administrative security controls appropriate to your plan.

16. Nexora InsightPro Connector Setup

- 1 Install the desktop data connector for Windows or macOS, where needed.
- 2 Import an initial dataset using CSV or spreadsheet import.
- 3 Build your first interactive dashboard.
- 4 Configure scheduled reports where needed.

17. Nexora Connect Channel Setup

- 1 Configure your customer-support inbox.
- 2 Set up email integration for your support address.
- 3 Enable live chat where applicable.
- 4 Create response templates for common questions.

18. Updating Applications

Nexora desktop and mobile applications are updated periodically with maintenance releases, bug fixes, and security updates. Updates are generally applied automatically or through your device's application store; keeping applications up to date helps ensure the best experience and continued support.

19. Uninstalling Applications

Desktop applications can be removed using your operating system's standard application-removal process. Mobile applications can be removed using your device's standard uninstall process. Uninstalling an application does not delete your Nexora account or your data stored in Nexora products.

20. Common Installation Problems

20.1 Download Failure

If a download fails, confirm your internet connection and try downloading again through an official Nexora channel or approved application store.

20.2 Installer Does Not Open

Confirm that the installer file downloaded completely and that your operating system meets the minimum supported version before trying again.

20.3 Unsupported Operating System

If your operating system version is not supported, review the requirements in Sections 7 through 10 and update your operating system where possible before installing.

20.4 Login Failure

If you cannot sign in after installation, confirm your registered email address and password, and use the password reset flow if needed.

20.5 Connection Problems

Connection problems are usually related to an unstable internet connection or a network configuration that blocks access. See Section 21 for firewall and network considerations.

20.6 Synchronization Issues

If desktop data is not synchronizing, confirm your internet connection is stable and that the application has permission to run in the background on your device.

21. Firewall and Network Considerations

Some corporate or school networks apply firewall rules that can restrict access to cloud applications. If you are unable to connect from a managed network, contact your network administrator to confirm that access to Nexora services is permitted, or try connecting from an alternative network.

22. Contacting Technical Support

If an installation problem cannot be resolved using this guide, contact Nexora technical support through the support-ticket portal, the AI support assistant, or email support, and describe the product, platform, and the specific issue encountered.
