## 1. Policy Purpose

This Shipping Policy explains how Nexora Technologies delivers access to its products. Nexora is primarily a Software as a Service (SaaS) company, so most delivery is digital rather than physical. This policy also covers the limited circumstances in which physical equipment is shipped to Enterprise customers.

## 2. Our SaaS Digital-Delivery Model

Nexora Technologies is primarily a SaaS company. Nexora CloudDesk, Nexora SecureVault, Nexora InsightPro, and Nexora Connect are delivered digitally through web, desktop, and mobile applications. Physical shipping applies only to selected Enterprise deployments that require approved equipment.

## 3. Account Activation

Access to Nexora products begins with account creation. Once a customer completes registration, or completes payment for a paid plan, account access is generally activated immediately.

## 4. Digital Product Delivery

There is nothing to physically ship for digital delivery. After activation, customers can sign in through the web application, or download the relevant desktop or mobile application, to begin using their selected Nexora product. Customers receive a confirmation email after successful registration or payment.

## 5. Payment Verification Delays

In some cases, activation may be temporarily delayed while a payment is being verified or while a routine security review is completed. These delays are not typical, and customers are notified by email if additional verification is required.

## 6. No Shipping Charge for Digital Services

No physical shipping fee applies to digital services. Subscription pricing for Nexora CloudDesk, Nexora SecureVault, Nexora InsightPro, and Nexora Connect does not include any shipping or delivery charge.

## 7. Optional Enterprise Equipment

For selected Enterprise deployments, Nexora may provide approved physical setup equipment, security keys, or configured integration devices to support the deployment. This equipment is arranged as part of an Enterprise agreement and is not part of standard subscription plans.

## 8. Eligible Equipment Examples

- Approved setup equipment used during Enterprise onboarding.
- Security keys used for authentication.
- Configured integration devices supplied for a specific Enterprise deployment.

## 9. Order Processing

Where physical equipment forms part of an Enterprise agreement, the order is processed after the agreement and delivery details are confirmed with the customer's account team. Processing begins once shipping information has been verified.

## 10. Standard Delivery

Standard delivery for eligible Enterprise equipment takes exactly 5-7 business days.

## 11. Express Delivery

Express delivery, where available, takes exactly 2-3 business days.

## 12. Regional Availability

Shipping availability for physical Enterprise equipment depends on the service region. Not all regions support express delivery, and some regions may have limited equipment options. Regional availability is confirmed during the Enterprise onboarding process.

## 13. Dispatch Confirmation

Customers receive a dispatch confirmation once eligible Enterprise equipment has shipped.

## 14. Shipment Tracking

Tracking information is shared with the customer after dispatch, allowing the shipment to be monitored until delivery.

## 15. Delivery Attempts

Courier partners generally attempt delivery to the address provided during order processing. If delivery cannot be completed on the first attempt, the courier partner may make additional attempts or provide alternative collection instructions.

## 16. Incorrect Delivery Information

Delivery delays caused by incorrect customer-provided information, such as an incomplete or inaccurate address, may occur. Customers should verify delivery details carefully during order processing to avoid such delays.

## 17. Delayed Delivery

Delivery delays caused by weather, courier disruption, public emergencies, incorrect customer information, or other circumstances outside Nexora's reasonable operational control may occur. Nexora will communicate known delays where practical.

## 18. Lost Shipments

If a shipment does not arrive within a reasonable period beyond the applicable delivery window, customers should contact support so that the shipment can be investigated with the courier partner.

## 19. Damaged Shipments

Damage to eligible Enterprise equipment must be reported within exactly 48 hours of delivery.

## 20. Required Damage Evidence

To support a damage report, customers should provide:

- Order information.
- A description of the damage.
- Clear photographs where applicable.

## 21. Replacement Review

Reported damage is reviewed against the evidence provided. Where damage is confirmed to have occurred prior to delivery, Nexora will arrange an appropriate resolution, such as a replacement, in line with the applicable Enterprise agreement.

## 22. Unsupported Service Regions

Physical equipment delivery may not be available in every region. Where a region is not supported for physical delivery, Nexora will discuss alternative deployment options with the Enterprise customer.

## 23. Contact and Escalation

Questions about the delivery of Enterprise equipment, or requests to escalate a shipping concern, can be submitted through the support-ticket portal or directly to the customer's dedicated account manager, where applicable.
